

at his own expense such preliminary treatment or processing facilities as may be determined to be necessary to render his wastes acceptable for admission to the public sewers. Appropriate pretreatment technology includes control equipment, such as equalization tanks or facilities, for protection against "slugs" that might interfere with or otherwise be incompatible with the sewage works. Where there is reason to believe that the use of equalization tanks or other facilities which have potential for dilution is resulting in dilution, the Superintendent or Utilities Manager may impose mass limitations on the user employing such tanks or other facilities.

403. Prior Approval of Pretreatment Facilities. Plans, specifications, and other pertinent information relating to proposed preliminary treatment and processing facilities shall be submitted to the Board through the Utilities Manager's Office for examination and approval and no construction of such facilities shall begin until the Utilities Service Board and the Indiana State Board of Health have given their written approval. Such approval shall not exempt the person from the obligation to make further reasonable adaptations of such facilities prove necessary to secure the results desired. Plans, specifications, and other pertinent information shall also be submitted to the Stream Pollution Control Board for approval in accordance with Stream Pollution Control Board Resolution 330 IAC 3-1 through 3-3 (formerly No. SPC 15).
404. Operation of Pretreatment Facilities. When such preliminary treatment facilities are provided, they shall be maintained continuously in satisfactory and effective operating condition by the person at his own expense and shall be subject to periodic inspection by the Superintendent or Utilities Manager. The person shall maintain suitable operating records and shall submit to the Utilities Manager such monthly summary reports of the character of the influent and effluent as the latter may prescribe. The user shall notify the Superintendent and Utilities Manager immediately of any slug loading as defined herein and in accordance with Sections 307 through 309.
405. Grease, Oil, and Sand Interceptors. Grease, oil, and sand interceptors shall be provided when, in the opinion of the Superintendent, they are necessary for the proper handling of liquid wastes containing grease in excessive amounts, or any flammable wastes, sand or other harmful ingredients, except that such interceptors shall not be required for private living quarters or dwelling units. All interceptors shall be of a type and capacity approved by the Superintendent, and shall be located as to be readily and easily accessible for inspection, and kept clean at all times. Grease and oil interceptors shall be constructed of impervious materials capable of withstanding abrupt and extreme changes in temperature. They shall be of substantial construction, water-tight, and equipped with easily removable covers which when bolted in place, shall be gastight and watertight, and capable of the maximum flow rate of the pipe installed therein.

## SECTION 5. CONTROL OF ADMISSIBLE INDUSTRIAL WASTES

501. Major Contributor Permits. Any industrial user and any other user on demand of the Superintendent or Utilities Manager shall within 90 days of notice provide the Board with sufficient information to determine if that user be a major contributor, and shall be required to obtain a permit which describes the wastewater constituents and characteristics allowed and which sets forth the applicable surveillance schedule and the monitoring requirements the user shall be subject to in order to discharge into the POTW's sewerage system. A major contributor permit shall be valid for four (4) years unless process changes are made that, in the opinion of the Superintendent, alter the wastewater constituents and characteristics significantly. In the event of such a change, a new application shall be filed accordingly. A permit shall be renewed by new application at the end of four (4) years. The reapplication for renewal will be subject to normal application fees in force at reapplication. Nothing in a major contributor permit shall constitute an exception to the prohibitions and limitations on wastewater admissibility as set forth herein. Major contributors are subject to all applicable fees, rates, and charges set forth in this ordinance. In support of the application, the user shall submit, in units and terms appropriate for evaluation, the following information:
- (a) Name, address, and location (if different from the address);
  - (b) SIC number according to the Standard Industrial Classification Manual, Bureau of the Budget, 1972, as amended;
